Office Hours TBA

ASSOCIATE INSTRUCTOR

Rupali
TBA

INTRODUCTION

Bioinformatics is the study and application of technology to the problems of biology. We will explore these in this course

GRADES & GRADING POLICY

Grades are based upon

• Participation	10%
• Lab	15%
• Homework	15%
• Exam	20%
• Final	20%
• Semester Project	20%

Participation is based upon how well a student engages the class. Participation is based upon attendance to lecture, discussion in class, out-of-class events, etc.

Lab is where the student becomes familiar with programming problems. Attendance to laboratory is mandatory.

Homework allows students to apply what they've learned in lecture. Students have a week to complete the homework. Because solutions are posted the day homework is due, no late homework is generally accepted. Cheating is not tolerated.

The exam is comprised of a closed book portion and an open book, programming portion. The work must be done individually. The final exam is of the same form.

The semester project is work done with a faculty sponsor that will hopefully lead to a capstone.

SUNDRIES

In general incompletes (I) are not given unless there are compelling reasons. If a student must miss a class, he/she must anticipate this absence and contact the instructor well in advance.
